MODULE DESCRIPTION FORM

Module Information						
Module Title	Microprocessor			Modu	ıle Delivery	
Module Type	Core				■ Lecture	
Module Code	IT2104				■ Practical	
ECTS Credits		6				
SWL (hr/sem)		150				
Module Level		UG2	Semester	of Delivery 1		1
Administering Department		Information Technology	College	College	College of Science	
Module Leader	Aliabdulhussein ibrahim		e-mail	ali.abdul	ıli.abdulhussein19@uowa.edu.iq	
Module Leader's	Acad. Title	Asist. Lecturer	Module Leader's Qualification MS		MS.c	
Module Tutor	Aliabdulhussein ibrahim		e-mail	ali.abdul	li.abdulhussein 19@uowa.edu.iq	
Peer Reviewer Name		Dr .Maky H.Abdulraheem	e-mail maky.h@uowa.edu.iq			
Scientific Committee Approval Date		2024-09-17	Version N	umber		V01

Relation with other Modules					
Prerequisite module	None	Semester	None		
Co-requisites module	None	Semester	None

Module Aims, Learning Outcomes and Indicative Contents				
Module Aims	The purpose of the course is to teach and understand the main components and working principles of the 8086 processor. Understanding of basic computer architecture. Understanding memory organization and interaction with memory . Handling I/O units. The course analyzes the several components of a computing system: from the microprocessor internal architecture, up to system bus for peripheral devices management. The course also covers programming at assembly level.			
Module Learning Outcomes	 The course has following specific objectives: Teaching the student about the microprocessor and its components and how to implement the instructions. Learn assembly language Knowing the methods and stages of converting an assembly language program into symbols. Teaching the student, the principle of memory system and how it was divided the data into segments and how to link them. To explain the principle of data flow. 			
Indicative Contents	 Indicative content includes the following. Identifying the parts and components of the processor, the most important main units in the processor, identifying the memory, the most important signals that deal with it, and methods of accessing data inside the memory and the processor. A compiler design that uses specific algorithms in which data is entered in the manner of rules and laws are applied to it to know the results and to know the errors resulting in implementation and classify them according to their type and treat them 			

Learning and Teaching Strategies					
Strategies	The learning and teaching strategies for studying the microprocessor subject in an IT department involve a balanced approach of theoretical understanding and practical application. Lectures, interactive discussions, provide the necessary theoretical foundation. Practical exercises, group work, enable hands-on experience with microprocessor 8086. Giving lectures, carrying out assignments and practical issues inside the laboratories, conducting theoretical exams, discussions and scientific dialogues, and asking questions. These strategies ensure a comprehensive understanding of microprocessor and their relevance in the IT field.				

Student Workload (SWL)					
Structured SWL (h/sem) 60 Structured SWL (h/w) 4					
Unstructured SWL (h/sem)	87	Unstructured SWL (h/w) 6			
Total SWL (h/sem)	147 + 3 final = 150				

Module Evaluation							
		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome		
	Quizzes	7	10% (8)	2,4,6,8,10	1,2,3,4		
Formative	Homework assignment	3	10% (7)	2,5,8,9,12	All		
assessment	Onsite Assignments	5	10% (5)	3,5,8,10,11	All		
	Projects	1	10%(5)	12	All		
	Lab	5	10%(10)	3,5,7,9,12	All		
Summative	Midterm Exam	2hr	10% (10)	7			
assessment	Final Exam	3hr	50% (50)	16			
Total assessme	Total assessment 100% (100 Marks)						

Delivery Plan (Weekly Syllabus)				
	Material Covered			
Week 1	Fundamental to microprocessor			
Week 2	Microprocessor 8086 internal Architecture .			
Week 3	Bus Interface Unit, Execution unit, register organization. Address bus, data bus, control bus			
Week 4	Memory unit and R/W timing diagram			
Week 5	memory segmentation Instruction cycle			
Week 6	Memory addressing mode			
Week 7	Instruction format			
Week 8	Input / output devices and R/W timing diagram			
Week 9				
Week 10	Assembly Language Programming			
Week 11	Data transfer instruction set			
Week 12	Variable, Array and constant			
Week 13	Arithmetic and Logical instruction set			
Week 14				
Week 15	Rotate and shift instruction set			
Week 16	Preparatory week before the final Exam			

Delivery Plan (Weekly Lab. Syllabus)						
	Material Covered					
Week 1	Lab 1: Setting up the emu8086 simulation					
Week 2	Lab 2: the concept of Assembly Language					
Week 3	Lab 3: Practical basic on assembly language					
Week 4	Lab 4: learn to build a code using emu8086 simulation					
Week 5	Lab 5,6 :Learn to create code for data transfer instruction set					
Week 6	Lab 3,0 (Learn to create code for data transfer motivation set					
Week 7	Lab 7,8: Learn to convert from Assembly language to machine language					
Week 8	Lab 7,0. Learn to convert from Assembly language to machine language					
Week 9	Lab 9,10: Learn to create code for arithmetic and logical instruction set					
Week 10						
Week 11	Lab 11,12: Learn to deal with variable and array in emu8086 simulation					
Week 12						
Week 13	Lab 13,14: Learn to create code for rotate and shift instruction set					
Week 14	Lab 13,14. Learn to create code for rotate and smit mistraction set					
Week 15	Lab 15: implemented a code for preparing to the final exam					

Learning and Teaching Resources				
	Text	Available in the Library?		
Required Texts	The 80x86 Family, Design, Programming and Interfacing, 3rd edition, Prentice Hall, 2002.			
Recommended Texts	The Intel Microprocessors, Architecture, Programming and Interfacing, Barry B. Brey, Prentice Hall, 1994.			

Grading Scheme						
Group	Grade	Mark	Marks (%)	Definition		
	A - Excellent	Excellent	90 - 100	Outstanding Performance		
	B - Very Good	Very Good	80 - 89	Above average with some errors		
Success Group (50 - 100)	C - Good	Good	70 - 79	Sound work with notable errors		
(30 - 100)	D - Satisfactory	Fair / Average	60 - 69	Fair but with major shortcomings		
	E - Sufficient	Pass / Acceptable	50 - 59	Work meets minimum criteria		
Fail Group	FX – Fail	Fail (Pending)	(45-49)	More work required but credit awarded		
(0 – 49)	F – Fail	Fail	(0-44)	Considerable amount of work required		

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
